ABSTRACT
Abstract is not required for Clinical Images
CASE REPORT

A 73-year-old diabetic female was presented to the emergency department with lower abdominal pain and distension for five days. Physical examination revealed tenderness over her right iliac fossa and supra-pubic region. An abdominal X-ray (Figure 1) revealed a spherical structure in the pelvis in the expected position of the bladder with presence of intramural gas and a provisional diagnosis of emphysematous cystitis was made by the emergency physicians. Urinary catheterization performed yielded clear urine and urine dipstick did not reveal any evidence of urinary tract infection. The patient’s abdominal pain and distension worsened and a surgical consult was made. Further history corroborated with the patient’s family revealed that the patient has had associated absolute constipation for last five days. The abdominal X-ray was reviewed which also showed a loop of dilated transverse colon. There was suspicion of colonic intestinal obstruction. Computed tomography (CT) scan of her abdomen and pelvis (Figure 2) showed a massively dilated cecum extending into the pelvis with evidence of pneumatosis intestinalis secondary to a closed loop obstruction from a stenotic splenic flexure colonic tumor. The patient underwent an exploratory laparotomy which revealed a large circumferential and stenotic splenic flexure tumor causing resultant proximal large bowel obstruction. The cecum was massively dilated measuring

Pneumatosis intestinalis of the cecum mimicking emphysematous cystitis

Jun-Jie Ng, Kon-Voi Tay

Figure 1: Plain supine abdominal X-ray of the patient showing a circular radiolucent rim (as indicated by the arrow) at the expected position of the bladder in the pelvis suggestive of emphysematous cystitis.

Figure 2: (A, B) Coronal views of a contrast-enhanced computed tomography scan of the patient’s abdomen and pelvis showing a massive dilated cecum with pneumatosis intestinalis directed towards the pelvis causing an X-ray appearance that mimicked emphysematous cystitis, and (C) The massive cecal dilatation was due to a closed loop intestinal obstruction secondary to a stenotic splenic flexure colonic tumor (indicated by the arrow).
up to 14 cm in diameter and the cecal wall appeared thinned out and dusky. The ascending and transverse colon were also dilated up to 5 cm in diameter but still appeared healthy. The patient underwent a subtotal colectomy and was discharged well on postoperative day-10. Histopathological examination of the resected colon revealed a moderately differentiated adenocarcinoma of the splenic flexure exhibiting transmural invasion with involvement of the serosa and omental fat. There was no malignancy identified in 28 harvested lymph nodes and resection margins were free of tumor. The cecum demonstrated mural attenuation with mucosal ulceration and a small focal perforation. The histopathological findings corresponded to a provisional tumor node metastasis (TNM) staging of T4N0.

DISCUSSION

Emphysematous cystitis is a rare but potentially life-threatening clinical entity where there is presence of gas within the bladder wall and lumen during a urinary tract infection. It usually occurs in elderly women with poorly controlled diabetes mellitus [1–3]. Common causative pathogens are gas forming organisms like *Escherichia coli* and *Klebsiella pneumoniae* [4]. Patients with emphysematous cystitis frequently present with symptoms of abdominal pain, gross hematuria and fever but a significant proportion of patients can be asymptomatic with diagnosis of emphysematous cystitis made incidentally on abdominal imaging [5]. Intra-mural gas can be seen on plain abdominal or pelvic X-rays as curvilinear or circular areas of increased radiolucency in the expected position of the bladder and intra-luminal gas can be seen as an air-fluid level. In our patient, the abdominal X-ray revealed a circular radiolucent rim centrally located within the pelvis which was highly suggestive of emphysematous cystitis. Although she presented with lower abdominal pain, she did not have any other symptoms of cystitis such has hematuria, dysuria, urinary frequency or urgency. Urine dipstick analysis of the urine also did not reveal any evidence of urinary tract infection such as the presence of leucocytes or nitrites. In view of the discordance between her presenting symptoms, urine dipstick analysis and X-ray findings, a CT scan was subsequently performed which revealed that the rim of gas in the pelvis was actually pneumatosis intestinalis of the cecum. The cecum was massively dilated and directed into the pelvis secondary to a closed loop obstruction from a stenotic transverse colon tumor and competent ileocecal valve. We hypothesize that apart from pneumatosis intestinalis of the cecum, pneumatosis intestinalis of the sigmoid colon and rectum could also possibly mimic the X-ray findings of emphysematous cystitis. The subsequent management and disposition of a patient with pneumatosis intestinalis of the colon or rectum will differ significantly with that of emphysematous cystitis.

CONCLUSION

Plain X-ray finding of a curvilinear or circular radiolucent rim at the expected position of the bladder in the pelvis usually represents a diagnosis of emphysematous cystitis. However, it is prudent to investigate with further imaging such as a computed tomography scan if clinical findings are not congruent with emphysematous cystitis as adjacent structures such as the cecum, sigmoid colon or even rectum with pneumatosis intestinalis can mimic the X-ray finding of emphysematous cystitis and if not picked up may lead to delayed diagnosis and disastrous complications.

About Edorium Journals
Edorium Journals is a publisher of high-quality, open access, international scholarly journals covering subjects in basic sciences and clinical specialties and subspecialties.

Invitation for article submission
We sincerely invite you to submit your valuable research for publication to Edorium Journals.

But why should you publish with Edorium Journals?
In less than 10 words - we give you what no one does.

Vision of being the best
We have the vision of making our journals the best and the most authoritative journals in their respective specialties. We are working towards this goal every day of every week of every month of every year.

Exceptional services
We care for you, your work and your time. Our efficient, personalized and courteous services are a testimony to this.

Editorial Review
All manuscripts submitted to Edorium Journals undergo pre-processing review, first editorial review, peer review, second editorial review and finally third editorial review.

Peer Review
All manuscripts submitted to Edorium Journals undergo anonymous, double-blind, external peer review.

Early View version
Early View version of your manuscript will be published in the journal within 72 hours of final acceptance.

Manuscript status
From submission to publication of your article you will get regular updates (minimum six times) about status of your manuscripts directly in your email.

Our Commitment

Six weeks
You will get first decision on your manuscript within six weeks (42 days) of submission. If we fail to honor this by even one day, we will publish your manuscript free of charge.

Four weeks
After we receive page proofs, your manuscript will be published in the journal within four weeks (31 days). If we fail to honor this by even one day, we will publish your manuscript free of charge and refund you the full article publication charges you paid for your manuscript.

Mentored Review Articles (MRA)
Our academic program “Mentored Review Article” (MRA) gives you a unique opportunity to publish papers under mentorship of international faculty. These articles are published free of charges.

Favored Author program
One email is all it takes to become our favored author. You will not only get fee waivers but also get information and insights about scholarly publishing.

Institutional Membership program
Join our Institutional Memberships program and help scholars from your institute make their research accessible to all and save thousands of dollars in fees make their research accessible to all.

Our presence
We have some of the best designed publication formats. Our websites are very user friendly and enable you to do your work very easily with no hassle.

Something more...
We request you to have a look at our website to know more about us and our services.

We welcome you to interact with us, share with us, join us and of course publish with us.
